

And the Walls Go Down!

With your own pop-up model of Jericho, you can make the walls go down on command!

1. Cut out the two large pieces on the heavy outer lines.
2. The bottom piece is the background. Fold it in half to close it; then open it again.
3. Fold back on all the dotted lines on the city wall piece.
4. Glue the top and bottom tabs of the city wall to the rectangles on the background.

5. Curve the side pieces to form towers that bump out. Glue the last sections to the backs of the first sections of the towers.

6. When you flatten the back-ground, the walls fall down!
